# BEYOND ATTENDANCE

## Product Information Guide

## Fully Cloud Based Solution

Beyond Attendance is a cloud based Time and Attendance and Access Control solution requiring no on-site server or desktop installations.

The website is fully mobile friendly allowing you to access your data from any PC, Tablet or cell phone with an active internet connection.

All data is backed up daily across multiple locations to ensure data integrity and guaranteed uptime.

## Scaled Pricing Model

The product has a scaled pricing model allowing you to choose the offering that best suits your needs and offers maximum value for money.

Beyond Attendance is a Software As A Service (SaaS) offering so there are no fixed contract terms locking you in. Additionally, your monthly bill can vary depending on the number of active users on the system.

## Multiple Biometric Options

Full support for a wide range of biometric devices.

Available options include fingerprint, facial recognition, blood vessel mapping and thermal temperature detection.
Additional options for smaller teams include USB based units that can link directly into a POS system to allow for scanning in and out.

## Multisite Control

Due to the system being web based, multiple sites can be control from a single centralised location.

The additional benefit of the devices linking up in real time allows for immediate data retrieval without the need for store managers manually sending time sheets and other documentation to head office.

## Configurable Shift Rules

Work rules can be customised down to an individual level if needed. The system can cater for automatic deduction of lunch and tea breaks, removal of duplicated scans and automated rounding of start and end times.

An additional module also allows for automatic detection and assigning of shifts based off users start and end times using Machine Learning technology.

## Access Control

Supports integration with all turnstiles allowing greater control of movement within the factory and monitoring of restroom and changeroom visits.

The system can also be integrated with magnetic door locks to secure reception doors and storerooms.

## Customisable Reporting

Beyond Attendance allows for customised reporting to match your needs. Reports can also be created in multiple different formats.

The system also allows for external data points to be connected, perfect for analytics across multiple business units.

Integration with business tools such as SAP and Power BI is also supported.

## Payroll Integration

Full support is provided for all major payroll systems including, Pastel, VIP, Sage One and SAP.

Leave can also be exported from the system provided your payroll system supports this feature.

Excel Reporting can also be utilised for the creation of manual payroll template.

## Multiple Users

Beyond Attendance allows for multiple users to have access to the system, perfect for large organisations.

Users can have limited access depending on their roll and can even be limited to certain teams or departments within the business.

Administrator approval can also be enabled when dealing with multiple teams spread over large geographic areas.
